**DATA EVALUATION RECORD  
ESTUARINE FISH EARLY LIFE-STAGE TEST  
GUIDELINE 72-4**

1. **CHEMICAL:** Ethoprop **PC Code No.:** 041101

2. **TEST MATERIAL:** Ethoprop Technical **Purity:** 96.8%

3. **CITATION:**

**Author:** Joseph V. Sousa  
**Title:** Ethoprop Technical - Early Life-Stage  
Toxicity Test with Sheepshead Minnow  
(*Cyprinodon variegatus*)

**Study Completion Date:** December 12, 1997

**Laboratory:** Springborn Laboratories, Inc., Wareham,  
MA

**Laboratory Report ID:** 97-10-7127

**Sponsor:** Rhone-Poulenc Ag Company, Research  
Triangle Park, NC

**MRID No.:** 444721-01

**DP Barcode:** D242881

4. **REVIEWED BY:** Karl Bullock, M.S., Environmental Scientist,  
Golder Associates Inc.

**Signature:** *Karl Bullock* **Date:** 3/18/98

**APPROVED BY:** Pim Kosalwat, Ph.D., Senior Scientist,  
Golder Associates Inc.

**Signature:** *P. Kosalwat* **Date:** 3/18/98

5. **APPROVED BY:**

**Signature:** *M.G. Tedoff* **Date:** 3/20/98

6. **CONCLUSIONS:** This study is scientifically sound and fulfills the guideline requirements for an estuarine fish early life-stage test. Based on the most sensitive endpoints (length and wet weight), the NOEC and LOEC were 5.9 and 11 ppb ai, respectively. The geometric-mean MATC was determined to be 8.1 ppb ai.

7. **ADEQUACY OF THE STUDY:**

A. **Classification:** Core.

B. **Rationale:** N/A

C. **Repairability:** N/A

**8. MAJOR GUIDELINE DEVIATIONS:**

1. The test consisted of only 2 true replicates; 4 replicates are recommended.
2. Embryos used in this test were  $\leq$  27 hours old at test initiation. The guidelines recommend embryos be  $\leq$  24 hours old.

**9. MATERIALS AND METHODS****A. Biological System**

Guideline Criteria	Reported Information
<b>Species:</b> An estuarine fish species, preferably a silversides species or sheepshead minnow ( <i>Cyprinodon variegatus</i> ).	<i>Cyprinodon variegatus</i>
<b>Source</b>	Embryos were obtained from Aquatic BioSystems, Inc., Ft. Collins, CO. Fertilization success was estimated to be 62%.
<b>Age at beginning of test:</b> Embryos 2 to 24 hours old.	Embryos $\leq$ 27 hours old.
<b>Replicates:</b> Minimum of 20 embryos per replicate cup, 4 replicates per concentration.  Minimum of 30 fish per treatment for post-hatch exposure.	80 embryos per incubator cup; 1 cup per replicate vessel; 2 replicate vessels per treatment or control.  Post hatch exposure: On test day 7 (3 days post-hatch), surviving larvae were thinned to 27 fish per replicate (54/treatment). Replicates A and B of the 25 $\mu$ g ai/L group contained only 26 and 20 larvae, respectively.

Guideline Criteria	Reported Information
<b>Post Hatch:</b> % of embryos that produce live fry must be $\geq$ 50% in each control; % hatch in any control embryo cup must be no more than 1.6 times that in another control cup.	54-58% of embryos in the control produced live fry.
<b>Feeding:</b> Fish should be fed at least twice daily. Fish should not be fed for at least 24 hr prior to termination on day 32.	Fish were fed live brine shrimp nauplii 3 times daily until the day prior to test termination when food was withheld.
<b>Counts:</b> At a minimum, live fish should be counted 11, 18, 25, and 32 days after hatching.	Survival of embryos and larvae was recorded daily.
<b>Controls:</b> Avg. survival at end of test must be $\geq$ 80%. Survival in any control chamber must not be $<$ 70%.	100% survival in the control at test termination.
<b>Controls:</b> Negative control and carrier control (when applicable) are required.	A dilution water control was used.

**Comments:** Only two replicates per treatment level were used in this test.

#### B. Physical System

Guideline Criteria	Reported Information
<b>Test Water:</b> <ol style="list-style-type: none"> <li>1) May be natural (sterilized and filtered) or a commercial mixture;</li> <li>2) Natural seawater should have weekly range of salinity less than 6%, monthly pH range less than 0.8 pH units;</li> <li>3) Salinity should be <math>\geq</math> 15 parts per thousand;</li> <li>4) Water must be free of pollutants.</li> </ol>	<ol style="list-style-type: none"> <li>1) Natural filtered seawater.</li> <li>2) pH range of 7.8-8.1 during test.</li> <li>3) Salinity range of 30-32% during test.</li> <li>4) No significant levels of pollutants were detected.</li> </ol>

Guideline Criteria	Reported Information
<b>Test Temperature:</b> Depends upon test species; should not deviate by more than 2°C from appropriate temperature. For sheepshead minnow, either 25°C or 30°C is recommended.	Mean: 25°C Range: 25-26°C
<b>Photoperiod:</b> Recommend 16L/8D.	16 hours light/8 hours dark.
<b>Dosing Apparatus:</b> Intermittent flow proportional diluters or continuous flow serial diluters should be used. A minimum of 5 toxicant concentrations with a dilution factor not greater than 0.5 and controls should be used.	An intermittent-flow proportional diluter was used. The test consisted of a dilution water control and 6 concentrations with a dilution factor of 0.5.
<b>Toxicant Mixing:</b> 1) Mixing chamber is recommended but not required; 2) Aeration should not be used for mixing; 3) It must be demonstrated that the test solution is completely mixed before intro. into the test system; 4) Flow splitting accuracy must be within 10%.	1) A mixing chamber was used. 2) Aeration was not used in mixing. 3) No undissolved test material was observed. 4) Not reported.
<b>Test Vessels:</b> All glass or glass with stainless steel frame.	Test vessels were 39 X 20 X 25 cm and contained approximately 15 L of exposure solution.
<b>Embryo Cups:</b> 120 ml glass jars with bottoms replaced with 40 mesh stainless steel or nylon screen.	Embryo cups were constructed using glass jars (5 cm O.D., 8 cm high) with 475-µm Nitex® mesh screen bottoms.
<b>Flow Rate:</b> Flow rates to larval cups should provide 90% replacement in 8-12 hours. Flow rate must maintain D.O. at above 75% of saturation and maintain the toxicant level.	6.5 volume additions every 24 hours; 90% replacement in 8 hours.

Guideline Criteria	Reported Information
<b>Aeration:</b> Dilution water should be aerated to insure D.O. concentration at or near 100% saturation. Test tanks and embryo cups should not be aerated.	D.O. $\geq 72\%$ (5.1 mg/L) of saturation at all times.

**C. Chemical System**

Guideline Criteria	Reported Information
<b>Concentrations:</b> Minimum of 5 concentrations and a control, all replicated, plus solvent control if appropriate. <ul style="list-style-type: none"> <li>- Toxicant conc. must be measured in one tank at each toxicant level every week.</li> <li>- One concentration must adversely affect a life stage and one concentration must not affect any life stage.</li> </ul>	<ul style="list-style-type: none"> <li>- Dilution water control and six nominal concentrations (1.6, 3.1, 6.3, 13, 25, and 50 <math>\mu\text{g ai/L}</math>).</li> <li>- Toxicant concentrations were measured on days 0, 5, 12, 19, 26, and 33 in each replicate vessel of the controls and treatments.</li> <li>- NOEC and LOEC were achieved.</li> </ul>
<b>Other Variables:</b> <ol style="list-style-type: none"> <li>1) D.O. must be measured at each conc. at least once a week;</li> <li>2) Natural seawater must maintain a constant salinity and not fluctuate more than 6% weekly; monthly pH range <math>&lt;0.8</math> pH units.</li> </ol>	<ol style="list-style-type: none"> <li>1) D.O., pH, temperature, and salinity was measured daily in each aquarium.</li> <li>2) Salinity and pH did not fluctuate beyond recommended levels.</li> </ol>
<b>Solvents:</b> Should not exceed 0.1 ml/L in a flow-through system. Following solvents are acceptable: dimethylformamide, triethylene glycol, methanol, acetone, ethanol.	None

**Comments:** Mean measured concentrations ranged from 84 to 110% of nominal concentrations and were consistent between each replicate.

**10. REPORTED RESULTS**

Guideline Criteria	Reported Information
<b>Data Endpoints</b> must include: - Number of embryos hatched; - Time to hatch; - Mortality of embryos, larvae, and juveniles; - Time to swim-up (if appropriate); - Measurement of growth; - Incidence of pathological or histological effects; - Observations of other effects or clinical signs.	All appropriate data endpoints listed were reported.
<b>Raw data included? (Y/N)</b>	Yes

**Effects Data**

Toxicant Concentration ( $\mu\text{g ai/L}$ )		Mean Percent Hatch	Percent Post-Hatch Survival (29 days)	Total Length (mm)	Wet Weight (g)	Dry Weight (g)
Nominal	Measured					
Control	<0.43	56	100	25.4	0.27	0.077
1.6	1.5	63	100	25.6	0.28	0.083
3.1	3.3	77	98	24.4 <sup>a</sup>	0.24 <sup>a</sup>	0.070

25	23	46	100	23.7 <sup>a</sup>	0.23 <sup>a</sup>	0.068 <sup>a</sup>
50	46	67	100	24.2 <sup>a</sup>	0.24 <sup>a</sup>	0.072

<sup>a</sup> Significantly reduced when compared to the control ( $p<0.05$ ).

**Comments:** Hatching was completed by day 7.

**Toxicity Observations:** No sublethal effects were observed.

Statistical Results:

Statistical Method: Williams' test with response comparisons made between the treatment concentrations and the negative control (percentage data were arc sine square-root transformed prior to analysis). Analyses were performed using the mean organism response in each treatment group rather than individual response values.

NOEC: 46 µg ai/L

LOEC: >46 µg ai/L

MATC: Not determined

Most sensitive endpoints: None were affected.

**11. REVIEWER'S STATISTICAL RESULTS:**

Statistical Method: Bonferroni's Test and Dunnett's Test were used for continuous data (length and weight) and Williams' Test was used for survival and hatching success (percentage data were arc sine square-root transformed prior to analysis). Analyses were performed using individual response values; comparisons were made against the negative control.

NOEC: 5.9 ppb ai

LOEC: 11 ppb ai

MATC: 8.1 ppb ai

Most sensitive endpoint: Growth (length and wet weight)

**12. REVIEWER'S COMMENTS:** This study is scientifically sound and fulfills the guideline requirements for an estuarine fish early life-stage test. Based on mean measured concentrations and the most sensitive endpoints (growth and wet weight), the NOEC and LOEC for sheepshead minnows exposed to Ethoprop technical were determined to be 5.9 and 11 ppb ai, respectively. The geometric mean MATC was determined to be 8.1 ppb ai. This study is classified as Core.
